  - o Go to the WHAM folder path
  - o Do: node server.js
- Running the application
  - o Open Google Chrome
  - o Open: localhost:3000

---

## *Management Instructions*

---

- Install Visual Studio 13
- If an error encountered while running the Node Server (node server.js), do the following:
  - o Npm install <package\_name> (replace <package\_name> with the missing package)
- If Mongo server is not started before running the Node Server, you get an error. So do the following:
  - o Run Mongo server in an instance of Terminal/Command Prompt (Command: mongod)
  - o Run Node server in another instance of Terminal/Command Prompt (Command: node server.js)
